

The Texas A&M Veterinary Medical Diagnostic Laboratory (TVMDL) now adds a validation QR code to all Equine Infectious Anemia (EIA), trichomoniasis, and piroplasmiasis report forms. This will allow quick and easy verification that the physical copy matches the original record in our system. All EIA, trichomoniasis, and piroplasmiasis reports can be validated using any QR scanner app on a smart phone.

Here's How:

1. Using a smart phone, download a QR scanner app. iPhone users have the option of using their camera app to scan QR codes without downloading a third-party app.
2. Scan the QR code at the top of the report.
3. Once scanned, a TVMDL branded original report will be displayed.
